

"ISRO Bhuvan LULC analysis of Gurugram District (2026 data).

Key findings: Built-up areas (red) cover 23.08 km^2 (central core).

Agricultural lands (yellow) dominate peripheries at 15.86 km^2 .

Vegetation/forest (green) limited to 1.58 km^2 , indicating urban pressure on green spaces.

Spatial patterns highlight need for peripheral green belts in regional planning."
